C. P. R. ENTERS BROADCAST FIELD

Rex Battle

John Goss

Alf Heather

A series of radio broadcasts has been inaugurated by the Canadian Pacific Railway every Friday night from 10 to 11 over CKAC in Montreal and CKRW in Toronto with possibility of extension to other major Canadian cities in the near future. The hosts of the programme have been organized under the patron of Rex Battle, whose work as the director of concert orchestras in Montreal and latterly at the Royal York, Toronto, has won him great popularity. A small opera company has been organized for the production of light ballet operas such as have featured the Canadian Pacific Music Festivals at Toronto, Winnipeg, Regina, Vancouver and Victoria, and these will be given under the direction of Alf Heather, well-known character actor and impresario. Billed operas in French produced at the Quebec Festival, together with French-Canadian folk songs, will be produced under the direction of Charles Marchand, a character actor from the ballet, "Baudouin de la Grande", with music of John Goss, who will star in the radio production. The other hosts are of Rex Battle, leader of the orchestra, and Alf Heather, character actor and producer of the ballet operas to be broadcast.

Fuego Is Burning Waste Gas

A 500 barrel tank is being erected this week at Fuego No. 1, and when completed, a production test will be made.

Waste gas from the well is now being burned, and the reflection of the Fuego beacon, is visible for many miles.

Mr. A. D. MacArthur, managing director, expects to leave tomorrow morning for Toronto to attend the annual shareholders meeting. On his return considerable activity in the field is expected.

Since the Fuego well first came in last fall, thousands of acres have been leased in the vicinity of the field, and while no official statements have yet been made by holding companies, it is practically certain that development work will be commenced by some of them this year, and Oyen should figure prominently in the oil news.

WEDDING

KRAMER-PATRIDGE

A quiet wedding ceremony was performed at Hanna, on Tuesday, March 4, 1930, by the Rev. Richard Westaway, when Lillian J. Patridge of Sunnydale, was united in marriage to Wilfred B. Kramer, also of Sunnydale. Mr. and Mrs. Kramer left for Calgary and points south by motor.

IN LIGHTER VEIN

A disheartened beginner does golf a game in which you try to get a ball into a hole with instruments singularly ill-adapted for the purpose.

"What did your father say when he found his broken pipe?"

"Shall I leave out the swear word?"

"Certainly, dear."

"Then, I don't think he said anything."

LEGAL NOTICE

NOTICE TO CREDITORS AND CLAIMANTS

In the Estate of JOHN DRAMLEY late of the District of New Bridgen, Farmer deceased.

Notice is hereby given that all persons having claims on the estate of the deceased John Dramley who died between the months of April and December 1928, are required to file with the undersigned Administrator of his estate by the 15th day of April, 1929, a full statement duly verified, of their claims and any securities held by them, and that after that date the Administrator will distribute the assets of the deceased among the parties entitled thereto, having regard only to the claims of which notice has been so filed or brought to his knowledge. Dated this 27th day of February, 1929.

THE TRUSTS AND GUARANTEE COMPANY LIMITED

227 Eighth Avenue West,

Village of Oyen.

Board of Trade

Is Re-organized

Business men of town met in Snyder's garage last Saturday evening at 8:30, and re-organized the Oyen Board of Trade. The meeting was well attended and lively support was promised by those present. The following officers were elected:

President, Mr. J. W. Robinson; Secretary-Treasurer, Mr. H. R. Chapin.

Dr. J. P. Kerr and Mr. W. D. Morrell were appointed as a membership committee, and these gentlemen will make a canvass for members this week. The annual membership fee was set at three dollars.

Mr. Chas. E. Snyder, Mr. A. O. MacArthur and Mr. H. J. Cooper, were elected as a publicity committee.

A meeting of the new organization will be held at Snyder's garage on Saturday, March 8, at 8:30 p.m. and all business men of town are asked to attend and join the organization.

Young People Stage Play

At Kenmaul School

The young people of Kenmaul district presented the two-hour stage play "Jimmy Yohnson's Yob" at Kenmaul School last Friday evening before a couple of hundred, under the management of Joe Rehill.

The cast was as follows: Peg, an Irish cook, Bertha McLean; Mickey, Bobbie McCallum; Sylvia, Frank Patridge; "Jimmy", Oscar Berg; Kitty, Ruth Packard; Frank (the cook), Gordon MacArthur; Mrs. Kent, Dora Rehill; Belle, Tommy George; Mr. Kent, Fred Parker; Pal (the detective), W. L. Jaques.

The young people taking part, as well as their manager, deserve great credit for their presentation which was well received by the audience. The entertainment was followed by a dance which continued into the small hours of the morning. Total proceeds were \$51.50.

A meeting of the young people's society will be held on Saturday, March 8.

Improper Housing As Bad As Disease

Children, Like Plants, Depend Upon So Numerous Causes (Canadian Hygiene Council.)

Let us consider today, those people who have not such comfortable homes as the average of this paper. The man who works in the mines, and then goes home to a little level to sleep; the man who works with his hands in the city, and then returns to a tenement house that really isn't a home at all, but merely a roof over his head—that is the type of worker that we have to bear in mind when we take up the housing problem.

It has been definitely proven after long and concentrated study that defective housing is an essential factor in interfering with the proper growth of children, and in the general health of any country.

We can take care of our food supply, and conquer germs, and do everything else necessary to conserve health and prolong life, but we can count none of our time and money when we give a great deal of attention to what is not only one of the hardest problems to handle—housing.

Overcrowding, lack of cleanliness, and improper ventilation are the three big enemies of proper housing. Rickets among children is the most prevalent disease in the slums of all large cities. Scurvy is the almost universal prevention and cure of this disease. Defective housing is equally certain one of the predisposing causes.

It probably does not occur to most people that the kind of home one lives in has much to do with the kind of teeth in one's head. Yet doctors have discovered that invariably when they take several hundred children who lived under better class conditions and compare them with several hundred children living under slum conditions, the teeth of the badly housed children are much inferior to the others.

In order to show how seriously defective housing affects the development of what otherwise might be a normal and healthy child, let us trace the developments of a rickety child, always bearing in mind that in the great majority of cases this very prevalent disease is directly attributable to the housing conditions of the victim.

Up to the time when a child is two years of age, the mental condition of the rickety child is practically sound. As a rule it is constantly exhausting its energies trying to get enough air into its lungs to live. Its activities are sometimes confined entirely to changes in the nervous system, over which it has no control, such as convulsions. Walking is delayed, speech is slow in coming, and when it does come, sometimes halts and marked by stammering. Mental development is slow.

When a rickety child reaches the school age it shows backwardness which sometimes lasts for quite a few years. It lacks the power of concentration. In extreme cases, the child, finding himself below normal, is apt to become moody, badly-tempered and troublesome.

A peculiarity of the rickety condition is that the backward child of about seven years of age is apt to take a sport in its mental activities and seem to be highly and even unable to grasp the teachings it receives in school.

This fact puzzled the authorities for some time, particularly when they were being constantly told by mothers that their children who had been delicate the first five years of their lives suddenly took a turn for the better. Finally the doctors reasoned it out, and they came back to the same problem of housing again.

These children had been kept indoors, largely because their mothers were working women. The long winter months had taken their toll helped by the badly ventilated, crowded homes. When the children were allowed to escape from their captivity and sent to school this change came. The sunlight

and fresh air that came into their lives with their new freedom, had done the work. The rickety children were getting better, although they seldom reach the standard of children who escaped the disease.

In Australia, where there are great open spaces, the disease of rickets has been found very infrequently. South Africa has had the same experience. Now, as Australia and South Africa become more thickly populated, and the cities more crowded, the disease of rickets is beginning to show its head.

Rickets, however, is not confined entirely to the poorest sections. It is found in wealthy homes too, but when it is, the cause generally lies in the fact that the parents have denied their children the proper amount of sunshine and fresh air. In other words, they have crowded their child into the house. Rickets is the inevitable result, whether the food is good or bad.

With poor housing, rickets, anemia, defective teeth, are common. Tuberculosis is also closely associated with the problem. One city investigation of the causes of tuberculosis found that over six times as many cases came from homes of one room as in homes of four rooms or over.

An idea of the magnitude of the housing problem that faces us can be found in the statement that about seven million people can be found in the United Kingdom alone, who live in houses of three rooms or less.

Our aim as Canadians who are proud of our country and its people should be to endeavor to help and improve conditions for those people who live in houses that are detrimental to health. It is a question of broad legislation and requires a great deal of study before it can be handled, but everybody should lend a hand.

Requires Some Talent

Fishermen Has To Exercise Skill In Catching Halibut

It's fair to love and halibut fishing seems to be a rather misbegotten maxim but according to veteran fishermen it is quite a tricky business.

The halibut has long been known as the "lightning bolt" of the sea and the fisherman's food. Unlike its fellow denizens of the deep, it does not grow up the bait like a snapping turtle, but approaches it cautiously and after deciding that it is no catch to gobble it. Then is the time for the experienced man to call on all of his talent to land the wary fish.

Immediately upon feeling - the wind wait until he finds himself being drawn upwards before he begins his fight. Sometimes with a particularly stubborn specimen, the fisherman will, after getting him into the surface, suddenly let him run. They say that the halibut then will dive for the bottom and take a plummet, striking its head when it brings up with force enough to stun it. Then it is easily retrieved. It is in the summer fishing that a few miles off the shores of New England that the dorymen handling for fish will occasionally put such a little that the dorymen will sometimes cut their fingers rather than risk the chance of capsizing in trying to get him aboard and holding him there.

Paris Appears Gloomy

People Are No Longer Gay Says Prominent Author

France no longer laughs, says Louis Latour, prominent author, and he can't decide why.

Gaiety is gone, in any case, he concludes, and he, Andre Tardieu, the new premier, he concludes an effort to look on the bright side of things.

People actually do not smile as they did a generation ago, seriously says Latour. His book, "The New Condition Everywhere, in the cafes, on the stage, in books, and at home."

He asserts the average Frenchman has more money than previously, but less reason to worry about public affairs, and has within his reach more pleasure than ever.

Nevertheless, for reasons he can't fathom, Latour finds gloom everywhere, on people's faces, in their speech and in their writings. The better the book today, he says, the more lugubrious it is.

Express To Win Bet

Dr. Innocencio Gallardo, Panama, who has just begun his eighty-first year, expects to win an insurance bet.

"And they threw you out?" "Not until I had taught them to live. It was done." — Gutierrez, Madrid.

Hogs and Dairying

Increase In Butter Making Would Aid Bacon Production

Canada imported in 1929 about thirty million pounds of butter. Denmark, Holland and Sweden imported Canadian grain, made butter and using the skin and butter milk for their hogs, continued to dominate the market of the United States and other pork buying nations. That thirty million pounds of butter roughly would be obtained from 714,700 pounds of milk; if Canada made her own butter that quantity of extra milk would have to be produced; but nearly 700,000 pounds of skin and butter milk would remain for export. This fed as a customary by export hog raisers now bring on 657,000 hogs, together with the grain and exported to the three countries above named. That means Canada has eighty million pounds of bacon to send to Britain. The above is a very brief condensation of a long but interesting story told by the Canadian Meat Packers. It is estimated that thirty million pounds of butter will be imported into Canada this year.

No Cause For Worry

Baldness Should Be Considered Mark Of Progress

A prominent Philadelphia doctor says that "once baldness is present, nothing in the world can cure it. There is no need for members of the smooth domed variety to worry about that fact. The bald-headed eagle is the most noble of birds, the bald truth is the acme of veracity and a bald man is the acme of wisdom."

Causes Poor Germination

If Formalin Treated Grain Is Not Soon Very Soon

The preparation of grain for seed should be made before harvest. While the grain is still standing, impurities can be noted which will not be visible in the threshed grain. These impurities can either be rubbed out, or portions of the field which are clean, may be cut and threshed separately. When threshing, the grain should be saved by the best and plumped grain. It is delivered by the machine. Different portions of the field may give a different quality of grain. The best should be saved for seed.

In threshing, care should be taken to crack the grain or peel the hull from barley or oats, as this often causes a loss in percentage germination, and damaged kernels are difficult to remove from sound grain by any cleaning apparatus. Before commencing to clean grain for seed, care should be taken to have the mill perfectly free from all seeds. If properly worked, most cleaners will do good work, and, if carefully cleaned, the grain will select the best and cleanest grain, the work of the fanning mill may be lessened, and better work may be expected.

Grain saved for seed should be stored in a clean, dry bin, which will remain free from moisture until sowing. Grain should be sown in a clean, dry bin, which will remain free from moisture until sowing. Grain should be sown in a clean, dry bin, which will remain free from moisture until sowing.

Radio and War

Chinese Generals Use Wireless Extensively To Direct Movements Of Troops

China's military men have taken to wireless with great enthusiasm. Radio has been used by a hundred generals to direct the movements of troops in the recent large-scale civil war.

The atmosphere over China has been so thick with wireless messages from one general to his subordinates and another to his men in the field that the "radio" has had an unhappy time trying to pick up far eastern stations.

Probably the most devoted wireless supporter in China has been the former "Christian general," Marshal Feng Yuxiang. Several hundred miles from his nearest troops, Marshal Feng remained quiet at his mountain retreat 80 miles from Tai-yuan-fu, the capital of Shansi province, in the far northwest, but kept in constant touch with all his generals during the revolt against Chiang Kai-shek through his two wireless sets.

Marshal Feng declared that by the use of radio he received hourly reports of the movements of his troops from distant provinces, and sent instructions to his generals more quickly than he could have done if he had remained in the front line for many years ago.

The indiscriminate use of radio by militarists has turned the air over China into confusion. Soon or later a strong central government will regulate the use of wireless. But meanwhile, the business men are satisfied. The telegraph wires left to them, and their messages are not the kind which will be stopped by the censor. The business men are satisfied. The telegraph wires left to them, and their messages are not the kind which will be stopped by the censor.

A National Undertaking

World's Grain Exhibition and Conference To Be Held In Regina In 1932

After some discussion at a representative gathering in 1928, it was decided to hold a World's Grain Exhibition and Conference in Regina, Saskatchewan, in 1932. It was to do so arose out of the unanimous opinion that some such effort should be made to bring together world authorities on agriculture, particularly those interested in field crops, and further to bring into open, friendly competition grain and other foodstuffs from all parts of the world.

Hon. Dr. W. R. Motherwell, the Federal Minister of Agriculture, speaking at one of the preliminary conferences said that in holding such an exhibition and conference there are wonderful possibilities for stimulating interest in the improvement of cereal crops and in the disseminating of knowledge of how to improve agricultural conditions generally.

The capital city of Saskatchewan is in the heart of the largest area in Canada growing immense quantities of grain for export seemed to be the logical place for such an exhibition and it was therefore decided to hold a World's Grain Exhibition and Conference at Regina from July 25th to August 6th, 1932. It may be inferred, however, that the selection of a Saskatchewan city indicates any thing of a merely provincial nature. The Exhibition and Conference is national in character and world-wide in its appeal.

The undertaking is being supported by the Federal Government, every provincial government, and all the principal agricultural, industrial and agricultural organizations in Canada. Official invitations have been sent from the Dominion Government to all countries to send exhibits to the exhibition.

The Exhibition and Conference as its name implies, naturally divides itself into two parts. First, the competition in the show, and secondly, the addresses and discussions of the conference program.

The cash prizes offered in competition are larger than have ever before been offered before. The total amount of the prizes to be given for all kinds of classes there are fifty prizes. In a few of the classes the number of prizes range from forty down to twelve. In others, as in the case of the wheat section for example the first prize in each class amounts to \$2,500; the second, \$1,500; the third, \$1,000; the fourth \$800; the fifth, \$700; and so on down to the last prize. In all of the six classes in the wheat section there are 275 prizes.

There are sections also with prizes for property for the best wheat, corn, barley, buckwheat, rice, millet, flax seed, peas, soy beans, flax seed, alfalfa, clover, grasses, sunflower, field root seed and garden vegetable seed. The judging of the exhibits will be scientifically and carefully done during the summer of 1932, as all exhibits must be at Regina on or before April 1st, of that year. 1932 may seem to be a long way off but when it is remembered that there is only the coming season and next to produce the seed the time may be very short indeed.

The conference part of this world event will be of immeasurable importance to agriculture the world over. Provision will be made to accommodate large audiences in the lecture halls. Experts in agriculture from all parts of the world will deliver addresses and read papers upon many subjects touching agriculture—such subjects as soils, physics, chemistry, bacteriology, culture, fertilizers, plant diseases, experimental methods, insect pests, marketing, financing, milling, baking, machinery, and many others. Every opportunity will be given for discussion.

Older Than Britain's Throne The age of the famous Welsh Elis-Edfoed on the throne of King Llewelyn, George, at the Welsh National Kirk-Edfoed, at Liverpool. Certainly it is older than the throne of Great Britain. It is more than 700 years since the Welsh people first held a competition in their own language.

A MARK OF APPRECIATION

The photograph here shows: Hon. Charles A. Dunning, newly-appointed minister of finance (left), and Col. F. J. James, president of the Regina branch of the On-To-The-Bay Association (right), taken on the occasion of Mr. Dunning's recent visit to Regina, when he was feted by a great crowd of his home supporters. Col. James presented Mr. Dunning with a pair of Hudson Bay point blankets, as a mark of appreciation for the work of the former minister of railways, in connection with the building of the Hudson Bay Railway and the development of the key route to the world markets.

New Kind of Advertising

Sir Ernest Benn, one of the grand names of advertising in England, has lately sent home the "Advertiser's Weekly," in London, a page from a newspaper in Esthonia. It was filled with advertisements of screw-driven survivors and entrepreneurs named Pohl. His relatives, his staff and business associates, and some of his suppliers, all took space to express their grief. Let's say that no lineage-hungry newspaper starts this sort of thing in Canada.

CHAPTER III.—Continued

"A very green hat?" questioned the doctor.
"Exceedingly green," replied Charman. "Have you made its acquaintance this soon?"
"No, but we passed it on the road, or more correctly speaking, on the girl. I'll say it was some hat."
"It came from Chicago," sighed Charman. "It was ordered by mail. Are you aware what a—disgraceful thing it is to order a hat by mail?"
Though she spoke soberly, the corners of her mouth refused to remain sedate, and the doctor burst into a hearty laugh. They were chatting like old friends when they joined Grandma's moment later.

"You seem to be having a real good time," she commented. "Sit down, both of you. No use waiting your strength standing when it's not necessary. The doctor's over to the old man's giving busy a—disgraceful, or I miss my guess, she's been feeding her baby nince pie again. At least, I think she has for the poor child's in a spasm and the doctor had to run. He was black in the face—the baby, I mean; and little Jamie was all out of breath from hurring. Well, young man, did you decide on a room or aren't they good enough?"

"They're much too good," replied John Carter, as he brought a chair for Charman, and took the one by Grandma himself. "I shall feel like I'm sleeping in that magnificent old bedstead."

"The four-poster? Then you've taken the room in the ell. Well, it'll make things easier for Charman, even though it doesn't seem exactly proper to let you sleep where the help live. It's sunny, I'll admit that, and warm in winter. Father Davis won't care to put his help into a cold room. They're human beings like the rest of us; he used to say, 'and they ain't freeze so long as they'll carry up the cow.' That was before we put in the furnace. We had the first furnace in Wickfield," she added proudly. "Folk come from far and near to see it, and stand on the register, and it was Miss Buzzele saying that it was immoral to be so comfortable."

"I venture to guess that Miss Buzzele wasn't a cherisher of the poor about," said John Carter with a smile.

"Well, according to Charman," she began, then broke off suddenly. "Dear me, I'm an commenting Edward Howe for keeping his mouth shut, and rattling on about my neighbors with his own breath! But you'll find him so next breath! If you stay in Wickfield, Charman, you run and make some lemonade. Here comes the doctor, and he looks hot."

Charman stood on a step ladder in the room that had been Great-grandfather Davis's law office. The door and windows were opened to the breeze, and one passing could have seen, at frequent intervals, the furious shaking of a duster. For three weeks the doctor had occupied the ell bedroom. It had been Grandma's suggestion that he use the small building across the driveway for an office. They were at breakfast one morning when the idea came to her.

"Look here," she said. "You ought to have a place to see your patients. They'll have none of you so long as you go to Edward Howe. Why not use Father Davis's office? It's handy to the street, and as good a location as you could find."

"You mean that little old place in the yard here?"
Grandma nodded.
"It's years since it's been used; but it's well built, and won't need a mite of repairing. Joseph Ames built it, and there wasn't an honest carpenter in town. There's a good fireplace and a desk and plenty of bookshelves. Father's books can go up attic to make room for yours."

"Go!" ejaculated the young man, so fervently that Charman laughed as she handed him a cup of coffee.
"You seem impressed," she ventured.

"I am. It's an inspiration. I was just wondering if I'd better try to get a room over the hardware store; but this will be so much pleasanter and more convenient. It seems almost too good to be true—this wonderful boarding place, and an office just across the driveway. May I see it now?"

"Not till you've eaten a proper breakfast," replied Grandma. "Fam-

him the toast, Charman, I think he's too shy to ask for a second place."
"I'm not," denied the doctor, with his engaging grin, "but if you continue to feed me so bountifully, and your neighbors refuse to give me any work, I shall put on too much weight."

"You could stand a few pounds more and not be too fleshy," Grandma retorted, scrutinizing him closely. "Seems to me your cheek bones need covering."

"Grandma," reproved Charman sternly, "you mustn't make personal remarks. And if you're really through breakfast, Doctor Carter, I'll get the key and we'll inspect your office. I don't see why we shouldn't think of it before."

"I'm glad it's not flash with the sidewalk as I can see from the window who comes to you for medicine," commented Grandma. She had followed them to the door, and glanced up at Charman reached for a key hanging on a nail. "Dear me," she sighed, "how many days it is since I used to see Father Davis take that very key down every morning. It doesn't seem hardly longer away than yesterday, and it's almost a life time. He careful not to soil your dress, dearie. There'll be a sight to see when you follow."

"Want to come?" questioned the doctor. "I'll help you across."

Grandma shook her head.
"I've got to watch for the R. F. D. man, Ezra Bascomb. He promised to bring me a message from Emmy, and he might come. I don't follow."

"You open the doors and windows and let the air blow through. It'll be a good day," she said, and she followed him to the door, and Charman uttered an exclamation of pleasure.

"What a perfect place!"
"Isn't it?" said Charman. "And this room at the side will make a splendid waiting-room. I used to long to use the whole thing, but now I see house. Aren't these casement windows beautiful—and the mantel, too?"

"You'd have that, this built in the days when carpentry was an art, and a good builder took pride in his work. Joseph Ames carved those futed columns himself. I remember when your grandfather tell about that when it was a little girl. Let's open the windows. Grandma's right. It will take a lot of work to get it clean."

"I'll hire some one to do it. It's much too dirty a job for you," Charman laughed.

"It's not easy to hire any one in Wickfield, and many's the time I've tackled some things that I don't 'fancy' you pitch in and help—"

"I'll do very bit of it, but you stay still and give the necessary directions. My fingers itch to begin; but I promised Doctor Howe to go his rounds with him this morning. And don't you dare touch it in my absence, young lady! I won't have you doing jobs like this for me."

Nevertheless, when the doctor was out of sight, the breakfast dishes disposed of, and luncheon planned, Charman tied up her head in a blue handkerchief, donned a long apron, and went across the driveway to the office.

"I'll make a start," she mused, as she stood for a moment surveying the dust of years. "The first thing is to clean the top bookshelves. No sweeping the floor with all that dust to come down upon it! However, she had hardly reached the top of the ladder when a shadow fell across the doorway and some one said:

"What in thunder are you doing here?"
"Gracious! How you scared me!" The girl turned around and regarded the caller from her perch. "Where'd you come from, Jim, this time of day?"

As Jim Bennett came nearer Charman saw at once that he was wearing a new suit of rather better cut than usual, and that his shoes were polished to the 'cat's paw' degree.

(To continue.)

Saskatchewan Butter Production
An increase of 30 per cent in the output of creamery butter over that of 1928 is seen in a report of the dairy branch of the Saskatchewan Department of Agriculture. The production during 1929 was 14,786,200 pounds of butter, as compared with 11,310,490 in 1928.

Calgary Land Sales
Revenues from city land sales in Calgary during 1929 amounted to \$269,006.58 as compared with \$312,427.74 for 1928, according to D. R. Critchford, superintendent of lands for the city.

Has any one commented on the way I drive?
"Yes, one man said, 'Twenty dollars and costs.'"

New Fish Found in Manitoba Lake

Important Discovery Made By Winnipeg Scientist In Hiding Mountains

The discovery of a new species of whitefish in Clear Lake, in the Hiding Mountains of Manitoba, has been announced in a pamphlet by Alexander Bajkov, of the University of Manitoba Division of the Biological Board of Canada. The scientific name given to the new fish is "Coregonus Odonocheus" in honor of Dr. Charles H. Odonocheus, formerly of the University of Manitoba, who has done much for the advancement of the study of hydrology in Canada.

While related to the common whitefish, the newly-discovered species differs from it in that it has a more slender body, longer caudal peduncle, larger head and the presence of many small black spots on the fins and scales.

It is also common in Clear Lake. During the summer it lives at a considerable depth and in autumn comes to the shallower parts near the shore for spawning which takes place during the months of August and September.

During their first summer the young fish live near the surface and often jump from the water like trout. The average weight of the fish is about two pounds, and the maximum weight about four pounds. It spawns for the first time in the fourth or fifth year.

The discoverer of the new fish was, with Prof. F. Neave, responsible for the survey of Malaga and other lakes in Jasper National Park, Alberta, which resulted in the stocking of these waters with speckled trout. The average weight of the fish is about two pounds, and the maximum weight about four pounds. It spawns for the first time in the fourth or fifth year.

The discoverer of the new fish was, with Prof. F. Neave, responsible for the survey of Malaga and other lakes in Jasper National Park, Alberta, which resulted in the stocking of these waters with speckled trout. The average weight of the fish is about two pounds, and the maximum weight about four pounds. It spawns for the first time in the fourth or fifth year.

A Suitable Memorial

Carillon of Bells Suggested in Memory of Earl Haig

A carillon of bells temporarily erected in Hyde Park is attracting wide attention says the London Express. They will go ultimately to New Zealand, where they are to form a war memorial, but at present their music is delightful in London's ears.

At home have been searching for a long time to find a suitable memorial to Earl Haig. Proposals for an equestrian statue have met with scant approval or contempt. Why should not London set up a carillon in memory of Earl Haig, either in Hyde Park, or preferably, in Trafalgar Square, where the music of bells sounding twice or three times a day above the roar of traffic would be a constant reminder of what the Commander-in-Chief did for the nation?

Origin Of Menu Card

Duke Of Brunswick's Cook Had Idea 400 Years Ago

When one takes up a menu to order a meal, it is probably not that of its origin. Duke Henry of Brunswick when sitting at a sumptuous feast was not so to glance frequently at a long slip of paper. Questioned by his neighbor, the Count of Montfort, as to the reason of his table studies, he replied that the "master of his kitchen" had drawn up for his benefit a list of all the dishes just to enable his master to reserve his appetite for the best things to come. The other guests were so well pleased with the intelligent cook's invention that the habit of writing out menus of bills of fare instantly spread in Germany. The dinner where the custom began is said to have taken place at Rogenburg in 1511.

NO MEDICINE LIKE BABY'S OWN TABLETS

For Either The New Born Babe Or The Growing Child

There is no other medicine to equal Baby's Own Tablets for little ones, whether it be for the newborn babe or the growing child. The Tablets always do good. They are absolutely free from opiates or other harmful drugs and the mother can always feel safe in using them.

For the Tablets, Mrs. John Armour, R.R. 1, South Monaghan, Ontario, writes: "My baby, John, has been healthy, to whom when we have given only Baby's Own Tablets. The Tablets are the only medicine I have kept in any home where there are young children."

Baby's Own Tablets are a mild but thorough laxative which regulate the stomach and bowels; banish constipation and indigestion; break up colds and simply fever and make the baby easy. They are sold by medicine dealers or by mail at 25 cents a box from Dr. Williams' Medicine Co., Brockville, Ont.

Edmonton Civic Utilities

The five Edmonton city owned utilities created a record surplus during 1929 of \$315,562.16, in comparison with a surplus of \$507,765 the year before.

Minard's Kils Dandruff

The prize for good conduct at an English school was won by Peter Perfect.

Needless Pain!

The man who wouldn't drive his motor car half a mile when it's out of gear will often drive his brain all day with a head that's throbbing.

Such punishment isn't very good for one's nerves! It's unwise, and it's unnecessary. For a few tablets of Aspirin will relieve a headache every time. So, remember the accepted antidote for pain, and spare yourself a lot of needless suffering. Read the proven directions and you'll discover many valuable uses for these tablets. For headache, to check colds, to ease sore throat and relieve the infection. For relieving neuralgia, neuritis, rheumatism.

People used to wonder if Aspirin might be harmful. The doctors answered that question years ago.

Under the auspices of the Oyen District Builders Association, a grand community dance will be held in Oyen Theatre on Friday, March 28, Gentlemen \$1.00, ladies free. Keep the date in mind.

The interior of the R.C. Cafe is being redecorated this week.

The I.H.C. school of instruction on power farming, held in Oyen Theatre on Monday, was well attended. In the evening, motion pictures showing various processes of manufacture provided entertainment and instruction for two hours.

Mr. Charles Stewart and Mr. James Marshall returned to Oyen last Friday after a visit to Pollockville, where the former instituted a new masonic lodge.

Two rinks left yesterday to attend the Hanna hospital. Geo. Morrison, sk., was accompanied by Art. Johnson, Ray Anderson and T. O. Stephenson, and Geo. Langmuir, sk., was accompanied by J. Marshall, H. B. Chapin, and Phoebe. The present mild weather, will tend to make tough ice.

Rev. F. S. Smith of Moose Jaw, former incumbent of All Saints Church, was an Oyen visitor last Wednesday and Thursday, when he was the guest of Mr. and Mrs. G. S. Peck.

Owners of motor vehicles are warned not to drive same without 1930 license plates, which may be obtained by application to the Deputy Provincial Secretary, Edmonton. License plates are not issued locally, as in former years.

Mr. S. A. Miller left yesterday for Calgary, where he will spend a few days on business.

The senior C.G.L.T. social, and postponed for Friday evening of this week, has been postponed until Friday, next week. (Friday, March 14).

Rev. L. C. and Mrs. Scott were guests last Saturday evening at the home of Mr. and Mrs. H. B. Chapin, where a reception was held in their honor. The evening was pleasantly spent at cards, after which Mr. and Mrs. Scott were given a shower in which they received many useful gifts.

"Not how much land settlement work, but how good" was emphasized at the policy of the Canadian Pacific Railway Association by W. M. Neal, general manager of western lines, Canadian Pacific Railway, at the annual dinner of officials of the railway, held at the Hotel Vancouver last night. During the past five years the association had settled 475 families on 34,000 acres at a purchase price in excess of \$50,000,000.

The largest terminal grain elevator at any port on the seven seas has recently been put into operation at Vancouver by the Alberta Wheat Pool. It has a capacity of 1,500,000 bushels and is known as Vancouver Pool Terminal No. 1. During the crop year ended July 31, 1929, Vancouver shipped 36,318 bushels of grain as compared with 79,214,612 and 31,113,633 in the two previous years.

More than \$30,000,000 will be expended on new equipment, new lines, construction and improvement to existing equipment and roadbed by the Canadian Pacific Railway during 1930, according to an announcement made recently by E. W. Beatty, chairman and president of the company. Of this amount, \$15,000,000 will be expended in new equipment and conversion and improvement of existing equipment. \$15,000,000 in telegraphs; Canadian Pacific has been estimated to cost \$15,000,000; rail facilities in the west will account for \$10,000,000 and \$7,000,000 will be expended for eastern Canada lines. The first railroads will include \$2,500,000 for maintenance during 1930, but does not include large expenditure on ocean steamships, now in hand, and on immigration work.

Dial's Auction Sales

Sale of horses, farm machinery and household goods at the farm of Mr. Charles Savage, on the north-half of Sec. 12, Twp. 25, Rge. 4, (12 miles west of Acadia Valley) on Friday, March 7. Sale to commence at 1 o'clock. B. H. Dial, auctioneer.

Auction sale of 40 head of farm horses, 2 saddle horses and 1 registered shire stallion, at the ranch of J. Holman, Rge. 18, Twp. 26, Rge. 5, ten miles south and 3 miles east of Oyen, on Wednesday, March 12. Lunch at noon. Sale to commence at 1 o'clock. B. H. Dial, auctioneer.

A late report from Hanna, received just before going to press, was to the effect that George Langmuir's rink was going strong in the grand challenge, now being in the fourth. Starting with a bye in this competition, he won two games, one of which was against Anderson of Kindersley, whom he defeated by a wide margin.

Morrison's rink lost their game in the challenge, but won their first game in the next competition.

Can. Pacific President Declares Faith
in Canada; Based on Fine Progress

E. W. Beatty told delegates to Canadian Industrial Traffic League that "end is not yet" although this railway has spent \$386,000,000 in past decade in improvements, new railway facilities, new hotels, new ocean fleets leading to deeper pride and patriotism in the Dominion.

E. W. Beatty.

President of the Canadian Pacific Railway said today that the members of the Canadian Industrial Traffic League at Montreal recently. With the filing of this country and the advancement of its commerce, not only will new construction and new territory be required, but vastly enlarged and improved facilities in the older districts will be needed because they will be outgrown by the needs of the communities for which they are provided; he emphasized when pointing his faith in the future of Canada and when he declared that a general depression of all other business men a "grim" threat regard for our needs and an accurate appreciation of the fact that if 1930 was not a busy year we have done and are endeavoring to do.

Declaring that the policy of the Canadian Pacific Railway was one of faith in Canada and intelligent self-interest, Mr. Beatty supported his statements with figures of growth and deeply interesting figures of policy. He declared that the railway had expended more than \$386,000,000 during the past decade, in new construction and new equipment which provided Canada not only with improved railway facilities but with new passenger and freight service, a deeper pride and patriotism in the Dominion as well as by the nation-wide response to the influence and appeal of the music festival, which festivals, he emphasized, had been held in connection to the cultural life of this country and to its solidarity as a nation.

Railway problems, Mr. Beatty continued, were not the problems of the railway operator, directors and shareholders, but the problems of the business men generally. More and more the transportation companies were taking away from the business men generally public at large into their confidence in order that they could suppress railway problems and in turn give the intelligent public a better transportation companies. The companies have three functions to

RADIO BROADCAST

For the benefit of our Country patrons we broadcast daily over C.K.L.C., 4 p.m. to 4:30 p.m.

Transactions in Stocks, Bonds or Grain receive careful and prompt attention; and when so desired are confirmed by number in our daily broadcast.

Orders promptly executed over our private wire to Winnipeg and Chicago.

perform: to supply adequate service at reasonable cost; sufficient facilities to meet the needs of commerce, and to second the main street ahead of settlement in order that additional development may take place. These factors, he said, require adequate compensation for the service they render and more than \$38,600,000 during the past decade to provide new money for new enterprises. It was true that the Canadian Pacific was earning and paying seven per cent on capital stock from railway operations, but more was required in order to create reserve necessary for annual capital expenditure for part of the Canadian Pacific would appreciate the fate of a company which had to borrow everything it spent.

Conditions in Canada during the latter part of 1929, according to the decrease in the western grain crop caused a serious decline in railway earnings, but the decrease represented the result of an extraordinary combination of circumstances. The railways had no fall in efficiency nor had the country suffered from anything but a general depression. It was not a condition to give much ground for apprehension and Mr. Beatty declared that he fully expected to be repeated in subsequent years.

The Canadian Pacific Railway, he said, had a peculiarly national significance in that it was one of its investments in rail, steamships, hotels, telegraphs and other activities was in Canada, and from the day of its inception its policies had been dictated by faith in Canada and by intelligent self-interest. "I do not mean," he declared, "that the railway is a collection of factors which tend more towards commercial suppression than a combination of a national sentiment, a sense of public duty and unflinching striving for efficiency, in order that the solvency of the undertaking may never be questioned and that its powers may be adequately rewarded." The president declared when emphasizing that the Canadian Pacific was outstanding in these factors.

"Improvements in physical construction, construction of new lines and facilities is one way by which a corporation can show its faith in its business men generally," Mr. Beatty continued. "The Canadian Pacific in the past ten years has spent millions of dollars on capital account. It has done many things which represent a notable contribution, not only to its own facilities but to the communities in which its operations are conducted. It is that short period of time, it has rock-balled over 2,000 miles of rail and has blue-signalized over 1,300 miles also, has increased its rail mileage by about 2,500 miles, which a few years ago would have been considered a considerable system in itself. It has built the Vancouver one of the most modern piers in the world for ocean and coastal freight and passenger service. It has completed construction and lining of the great Comancha Tunnel, the Selkirk Mountains at a cost of more than \$10,000,000. It has borne its share of the cost of the great dividend in Toronto. It has increased its capital in enlarging, modernizing and strengthening its fleet and it has made the most conspicuous development through the efforts of Canadian engineers in designing and constructing the largest and most powerful locomotives in the British Empire.

The value of the Canadian Pacific as a good citizen was pointed out by the railway president. For many years, and particularly since the war the Canadian Pacific and many other companies have endeavored to associate themselves with, and support many community movements and to assist hospitals and educational movements. The value which applied to individual companies was also applicable to corporations.

It was a frequent and logical comment of railway officials in the States that they were heavily taxed and that they were almost struggling in its effect. There was no disputing the correctness of that statement and many of the railways were concerned, but he declared that the Canadian Pacific was not. "If I do not mean," he said, "that the railway is a collection of factors which tend more towards commercial suppression than a combination of a national sentiment, a sense of public duty and unflinching striving for efficiency, in order that the solvency of the undertaking may never be questioned and that its powers may be adequately rewarded." The president declared when emphasizing that the Canadian Pacific was outstanding in these factors.
